Thermal conductance of correlated states in graphene

(2+ years position starting early 2021, ERC StG project QUAHQ)

The Nanoelectronics group of SPEC is opening a post-doctoral position to experimentally investigate the thermal conductance of correlated states of graphene under high magnetic field. We are looking for a highly skilled and motivated candidate with a solid experience in graphene heterostructures fabrication and/or low noise measurements at cryogenic temperatures. Applicants should send a CV along with a brief motivation letter, and arrange for two reference letters to be sent directly to us.
